

We need to build a spring chamber to maintain groundwater levels and flows within watercourses to Wendover as part of **Wendover Green Tunnel and North Cutting works**.

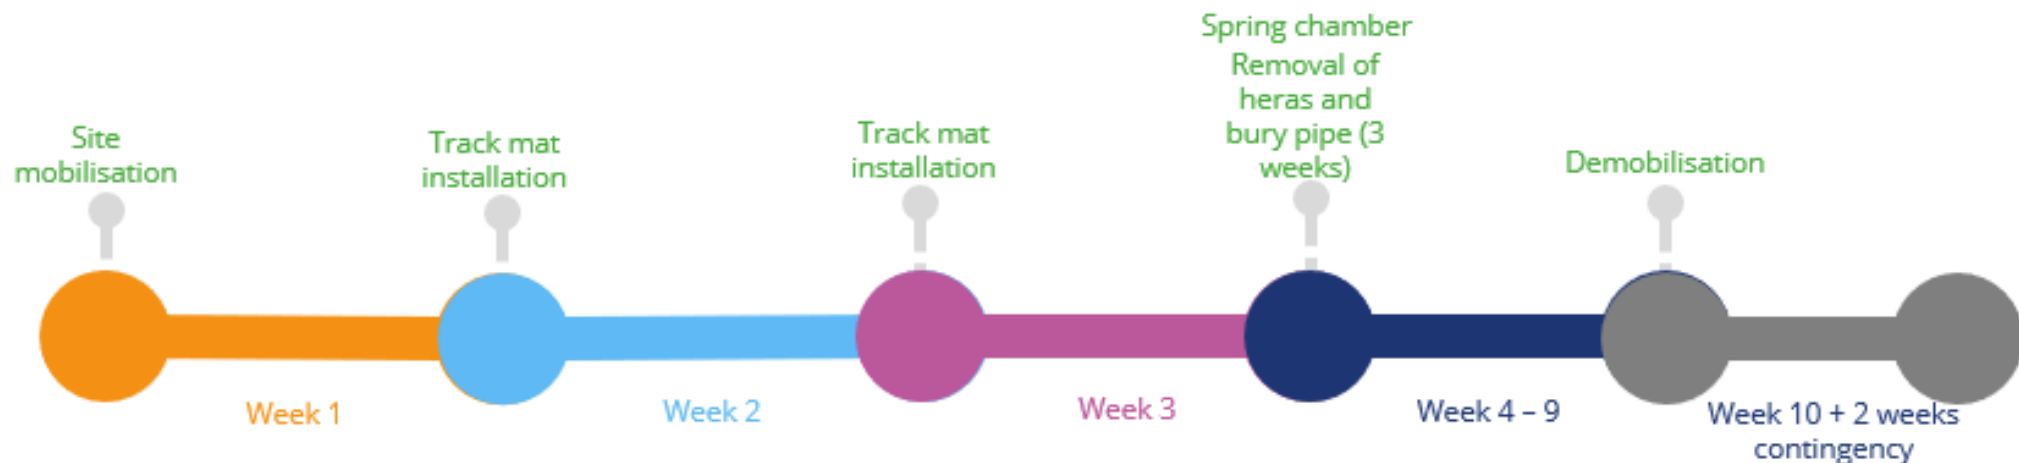

This will be located in the farmland **northwest of Wendover**.

Following a new planning application, access to the farmland area will be provided via Nash Lee End, avoiding the use of South Street and Dobbins Lane. The construction period is expected to last between **10-12 weeks**, with work scheduled to begin **between March and April**, subject to weather conditions and hibernation season ending.

Construction timeline

Below is the anticipated construction timeline of the spring chamber.

Please note, the construction sequence may change during the construction period.
